

In this tutorial you will learn how to setup Mozilla Thunderbird as an email client on your Mac OSX

What you will Need

1:- A valid email account, if you haven't created an email account yet please log into your Control Panel and set up an email account.

2:- An email client. This tutorial uses Mozilla Thunderbird, which is a free opensource email client.

Thunderbird is a standalone version of the Mozilla Mail client. It offers sophisticated mail management features without the associated Web browser. These instructions assume that you are using Thunderbird 0.5 (or greater) for MacOS X. The configuration might be slightly different for other versions of Thunderbird.

Step 1

When you launch Thunderbird for the first time the Account Wizard may start automatically. In that case, skip to step 2 below. If it does not, open the File menu, then click on New, then "Account...".

Step 2

The first screen asks what kind of account you want to set up. The default "Email account" is correct, so just click Next.

Step 3

Type in your name as you want it to appear on outgoing email in the Your Name box. Type in your email address in the form "benny@htg.net" where "htg" is your domain name. Then click Next.

Identity

Each account has an identity, which is the information that identifies you to others when they receive your messages.

Enter the name you would like to appear in the "From" field of your outgoing messages (for example, "John Smith").

Your Name:

Enter your email address. This is the address others will use to send email to you (for example, "user@example.net").

Email Address:

2

Step 4

Change the incoming server type to POP. In the Incoming Server box, type "luna.htg.net". For the outgoing server, you use the server provided by your ISP. i.e. "luna.htg.net"

Server Information

Select the type of incoming server you are using.

POP IMAP

Enter the name of your incoming server (for example, "mail.example.net").

Incoming Server:

Enter the name of your outgoing server (SMTP) (for example, "smtp.example.net").

Outgoing Server:

3

Step 5

Enter your full email address as the Incoming User Name

User Names

Enter the incoming user name given to you by your email provider (for example, "jsmith").

Incoming User Name:

Enter the outgoing user name given to you by your email provider (this is typically the same as your incoming user name).

Outgoing User Name:

4

Step 6

You will then be asked to name your account. You can leave the default, which is your email address, or change it. Then click Next.

Account Name

Enter the name by which you would like to refer to this account (for example, "Work Account", "Home Account" or "News Account").

Account Name:
